Linear Algebra - Greg Grant

Example 1 starts with any field and defines the objects, the addition rule and the scalar multiplication rule. We must show the set of n -tuples satisfies the eight properties required in the definition. (1) Addition is commutative. Let $\alpha = (x_1, \dots, x_n)$ and $\beta = (y_1, \dots, y_n)$ be two n -tuples.

If so, express each equation in each system as a linear combination of the equations in the other system.

Solution: Yes the two systems are equivalent. We show this by writing each equation of the first system in terms of the second, and conversely. \begin{alignat*} {2}
